Subject: Application for student work – IT

Dear Hiring team,

I am writing to express my interest in the Machine Learning Internship position at your company. I am currently pursuing a Master's degree in Data Science at Trier University, Germany, and I am looking for an opportunity to apply and further develop my knowledge in Machine Learning and AI.

Before starting my Master's program, I worked as a Flutter Developer at Avasoft, where I gained practical experience in software development, API integration, testing, debugging, and collaborating within agile teams. Working on real-world applications taught me how important it is to build reliable and user-focused solutions. It also helped me understand the complete software development lifecycle and strengthened my interest in creating end-to-end products that deliver real value to users.

Alongside my studies, I have been actively working on Machine Learning projects involving predictive analytics, data preprocessing, feature engineering, and model evaluation. What excites me most about Machine Learning is its ability to transform data into practical solutions that help users make better decisions and solve real-world problems. After learning about Machine Learning and AI, I became excited about their potential to solve many complex real-world problems that people actively face. I am particularly interested in predictive modelling and enjoy exploring how data can be used to understand patterns and address complex challenges.

I am eager to learn from experienced professionals, contribute my best efforts to your team, and continue growing my skills through practical industry experience. I am also willing to relocate if required.

Thank you for your time and consideration. I would welcome the opportunity to discuss my application further and look forward to hearing from you.

Yours sincerely,

Karthick Manickam.
